

# Data Center Software for Naval Mine Warfare

Data Center Software for Naval Mine Warfare enables tactical and environmental management of Mine Warfare data through Mine Hunting Vessels and Data Centers.

The software be readily used in all NATO member countries performing Mine Hunting operations.

## Key Features

- STANAG 1116 compatible Tactical Data Management
- Data transfer options through NATO member countries and Mine Hunting Vessels
- Enriched GIS features supporting Navy specific layers (S57, S63, AML, etc.)
- Advanced Query and reporting options
- Web based user friendly interface through secure networks

## Technical Capabilities

- Support for charts including but not limited to ENC, IENC, ARCS, AML, DNC/VMap, DTED and ARINC 424
- Support for WMS, WCS and WMST
- Geographic zone queries with spatial data support
- Contact correlation
- Authentication options (LDAP or local user)
- Advanced role and user management
- NATO STANAG 1116 compatibility
- Layer management options
- 3D chart support
- Advanced and adaptable query and reporting
- Lite release option for bandwidth restricted networks
- Advanced statistical analyses
- Platform independent usage capability
- Adaptable and scalable data structure
